### Ultra-High Power Photodetector

---

### VPDV2120

#### PRODUCT FEATURES

- Operational up to 20 GHz
- $\geq 22$  dBm RF output power @ 10 GHz
- High Linearity ( $> 30$  dBm OIP3 @ 10GHz)
- No cooling required

#### APPLICATIONS

- Microwave Photonics
- Analog Photonic links
- Radio-over-fiber

The VPDV2120 is a compact module that is based on a modified uni-travelling carrier (MUTC) photodetector chip. The VPDV2120 is not matched to 50  $\Omega$ . For applying a bias voltage of -6 V, an external bias-Tee is required. It has a responsivity of 0.55 A/W (1550 nm) and a high saturation photocurrent of 150 mA @ 10 GHz. The Ultra-high power PD is capable of delivering  $\geq 22$  dBm RF output power @ 10 GHz. The device exhibits a high linearity with typical OIP3 values above 30 dBm at a frequency of 10 GHz.

### Notice

Stresses greater than those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operations section for extended periods of time may affect reliability.

The inherent design of this component causes it to be sensitive to electrostatic discharge (ESD). To prevent ESD-induced damage and/or degradation to equipment, take normal ESD precautions when handling this product
