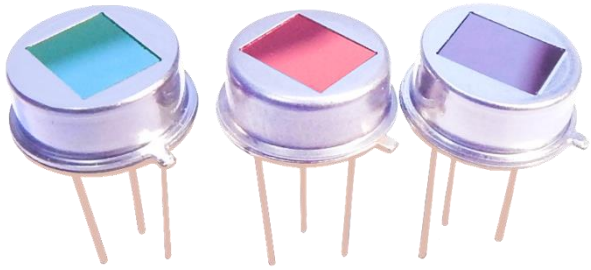
Thin Film Pyroelectric Flame Sensor

Introduction

The Pyreos thin film pyroelectric infrared flame detectors offer exceptionally high responsivity, a wide field of view of typically 100° (*subject to filter band pass specification) and class leading rapid recovery from thermal and electrical shocks (<1 second downtime). This current mode sensor has excellent signal to noise at the signature 8-10 Hz flicker range of a flame, and can provide accurate discrimination of flame sources in triple IR flame detection systems. The sensor element is built into a low noise circuit that has an internal CMOS op amp with a 10GΩ feedback resistor outputting a voltage signal centred around half the supply rail.



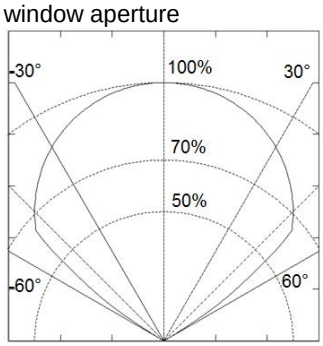
Sensor Characteristics	
Filter aperture	5.2 mm x 4.2 mm
Element size	1000 µm x 1000 µm
Package	TO39
Responsivity [1]	150,000 V/W
D* [1]	3.5 x 10^8 cm√Hz/ W
Noise [1]	Mean 70 µV√Hz
Field of View	Typical 100° [2]

[1] 10 Hz, 500 K, room temperature, without window and optics
[2] With reference to filter used in PY0573
[3] Absolute maximum operating voltage

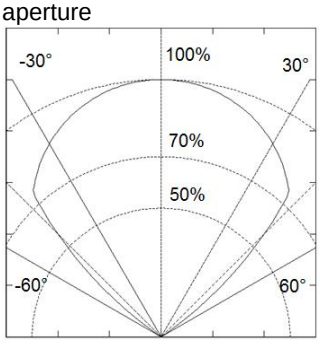
Electrical Characteristics	
Max. Voltage (+V) [3]	8.0 V
Min. Voltage (+V)	2.7 V
Output voltage normalised around mid-rail	
Microphonics	S_{vib}~2 µV/√Hz at 10 Hz
Time Constant	~12 ms
Operating Temperature	-40 to +85 °C
Storage Temperature	-40 to +110 °C
Op-Amp with 10 GΩ feedback resistor	
Filter	As per Filters Available table

Frequency Characteristics

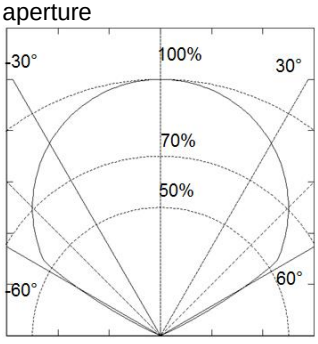
For V across horizontal window aperture



For V across vertical window aperture



For V across diagonal window aperture



Note: Normalised polar plots show max FoV achievable along x,y axis and diagonal without any filter applied.
